

Terraform Cloud & Enterprise

Terraform Cloud & Enterprise

- HashiCorp provides different packages for Terraform
- You can use Terraform for free - use the open source version
 - Great support, easy to get started
 - Most of the community uses open source Terraform
 - Highly scalable but can get difficult to manage as your infrastructure landscape gets larger
- Packages available for larger Enterprise support, using Terraform Cloud
 - Provides state and version management
 - A dashboard interface to package all your workloads/configurations, management portal
 - You are still writing Terraform code - main difference is where you run the code
- This course specifically covers Terraform open source
