Terraform Project
Wrap Up

HashiCorp
Terraform

Wrap Up

- Design and create a new Terraform project from scratch
- Gain familiarity with reading Terraform documentation
- Reduce duplication with Local Variables/Values
- Use Data sources to zip folders and files
- Easy cleanup with terraform --destroy --auto-approve
- Going multi region/environment
  - Lots of copying and pasting resource files
  - Extremely error prone
  - Is there a better way?
