Install Terraform (Linux/Mac)

Installing Terraform

- Downloading Terraform is fast and easy
  - Installs a single binary, which is the Terraform executable
  - Simply place the binary in location available in your $PATH environment variable
- To download the latest version: https://www.terraform.io/downloads
  - Only the latest version is offered
- To download a previous version: https://releases.hashicorp.com/terraform/
- In this course, we will be using 1.2.4
- After downloading Terraform & placing in available path, verify install with:
  - terraform --version
