Terraform Apply Advanced

HashiCorp
Terraform

Terraform Apply Advanced

- Similar behavior to terraform plan, looks at all your terraform code in the current directory
  - Consults the state file and all your code, to infrastructure in your real world environment
- terraform apply -target <resource_address>
  - Apply a specific resource rather than entire configuration
- By default, terraform apply asks for manual confirmation before applying changes
  - For automation, use -auto-approve flag to bypass confirmation
  - terraform apply -auto-approve
  - terraform apply -target <resource_address> -auto-approve
- terraform plan can save execution output into a file
  - terraform plan -out <filename>
  - terraform apply can take the file and apply based on proposed changes
  - terraform apply <filename>
  - This will AUTOMATICALLY apply changes, not ask for manual confirmation
